# SUSTAINABILITY IS EVERYTHING

DCS Design is proud to be at the forefront of designing to minimize impact to the environment and improve quality of life from our inception. From the earth-sheltered schools we designed in the 1970s, to the high-performance net-zero carbon footprint projects we are creating today, we have always provided our clients with innovative solutions to achieve improved performance metrics in energy savings, water efficiency, CO2 emissions reduction, improved indoor environmental quality, and stewardship of resources with sensitivity to their impacts.

We design buildings and interiors to qualify for various green building systems including LEED (Leadership in Energy and Environmental Design), EarthCraft, NGBS (National Green Building Standard), and Green Globes. We constantly seek out innovative technologies and best practices to help preserve our planet.
