

Loop Closing

Food waste disposal costs America \$11 billion every year, a massive drain on taxpayers and the businesses serving us that food. Most of that waste is put in dumpsters and hauled away to be buried in a landfill or incinerated. This cycle is not healthy, sustainable, or cost-effective. Current efforts continue to fall short without a path forward to meet the needs of our time.

Loop Closing's innovation is to provide an *on-site composting service* to lower food waste disposal's cost and environmental impact. We are a distributed regenerative solution that lessens current harmful food waste practices and their effects on our environment and your finances while restoring finished compost to the soil. Loop Closing helps hospitality, academic, grocery and commercial food service customers recover their portion of the \$11 billion Americans spend on food waste disposal annually by providing a circular, on-site composting solution that replaces dumpsters and hauling. See more here: www.loopclosing.com

Benefits

I. Lower Disposal and Hauling Costs Loop Closing's composting system cuts your dumpster/toter pull volume significantly, lowering your existing costs.

II. Straightforward, Customer-Friendly Contracts You won't find difficult contracts with drastic escalator clauses at Loop Closing. Our goal is to save you money, not pad our pockets.

III. Regulatory Compliance at a Lower Cost Government mandates that food waste be diverted from landfills are going into effect across the US. Loop Closing brings you into compliance with these mandates and cuts your waste management costs at the same time.

IV. Eliminate Smell and Pest Issues Composters eliminate the spills and smell of rotting food waste sitting in dumpsters, which forces pests like rats and roaches to look elsewhere for their next meal and makes your location much more pleasant for customers, staff, and neighbors.

V. Maximize Your Food Waste's Value Your food waste has value, and not just to the people who charge you to haul it by the ton. Loop Closing turns your waste into an asset that saves you money and, at higher volumes, can be sold back to your farms and food producers.

VI. Sustainability Marketing Loop Closing provides an easy way to adopt and promote sustainable business practices that will help attract today's more socially conscious guests, customers and employees.

VII. Reduced Groundskeeping Costs You can use your produced compost on-site for groundskeeping! It's the perfect replacement for soil amendments, fertilizers, or mulch, and doesn't need to be purchased or hauled.

VIII. Increased Compost Capacity Many businesses have tried to compost but been turned away from existing facilities due to lack of capacity. Loop Closing on-site composters solve this issue.

IX. Reduced Capital Cost No money down for clients: Loop Closing rents the composting machines.
